Fishermen to get modern boats to boost living standards

KUALA TERENGGANU: The Science, Technology and Innovation Ministry will build modern boats for use by class A and B fishermen to improve their financial and living standards.

Its caretaker Deputy Minister Datuk Ahmad Amzad Hashim said the ministry had given a grant of RM3.5 million to Universiti Malaysia Terengganu to build prototypes of modern fishing boats, which are expected to be ready in a year.

"Currently, we are still using old types of boats for class A and B fishermen, made of *cengal* wood. We know that the price of wood, especially *cengal*, is high, and its supply is depleting.

"Building modern fishing boats is faster and cheaper using new technology. The boats are lighter and do not require large engines, and if there are any repairs to be done, it can be carried out fast."

Ahmad Amzad was speaking at a media conference yesterday.

He added that these modern boats would be equipped with fishing and satellite technologies to detect areas with high fish population, based on colour sensing from satellite images.

He said with the completion of the prototype boats, the ministry would consult the Fisheries Department to get fishermen to test the boats.

"If such boats are suitable for use, the ministry will cooperate with the Agriculture and Food Industries Ministry for a boat ownership scheme to be drawn up through the provision of an incentive for class A and B fishermen, who wish to change their fishing methods to modern ones." – Bernama

Modern fishing boats to raise fishermen's income

KUALA TERENGGANU: The Ministry of Science, Technology and Innovation (MOSTI) will build modern boats for use by class A and B fishermen towards improving their economy and living standard.

Its deputy minister, Datuk Ahmad Amzad Hashim said the ministry had given a grant of RM3.5 million to Universiti Malaysia Terengganu (UMT) to build prototype modern fishing boats which were expected to be ready in a year.

"Currently, we are still using the old types of boats involving class A and B, made of cengal wood. We know that the price of wood, especially cengal, is high and the supply is depleting.

"Building modern fishing boats is faster and cheaper and by using modern technology, these boats are lighter and do not require a big engine and if there is any repairs to be done, it will be fast," he said at a news conference, here, yesterday.

He added that these modern boats would be equipped with fishing technology and be combined with satellite technology to detect areas with a high fish population, based on colour sensing from the satellite images.

Ahmad Amzad said that with completion of the prototype fishing boats, MOSTI would be consulting the Malaysia Fisheries Department for the fishermen to test the boats.

"If such boats are suitable for use, MOSTI will be cooperating with the Agriculture and Food Industries Ministry for a boat ownership scheme be drawn up through the provision of an incentive for class A and B fishermen who wish to change their fishing method to a modern one," he added. — Bernama

MOSTI bina bot moden tingkat pendapatan nelayan

AHMAD AMZAD

KUALA TERENGGANU - Kementerian Sains, Teknologi dan Inovasi (MOSTI) akan membina bot nelayan moden bagi kegunaan nelayan kelas A dan B (bot bersaiz kecil), untuk meningkatkan ekonomi dan taraf hidup mereka.

Timbalan Menterinya, Datuk Ahmad Amzad Hashim berkata, MOSTI telah memberikan geran berjumlah RM3.5 juta kepada Universiti Malaysia Terengganu (UMT) bagi membina prototaip bot nelayan moden itu yang dijangka siap dalam tempoh setahun.

"Kita masih lagi menggunakan kaedah lama terutama melibatkan bot nelayan kelas A dan B, yang mana bot dihasilkan daripada kayu cengal, kita tahu kayu adalah satu bahan yang mempunyai harga tinggi dan semakin berkurangan khususnya apabila melibatkan kayu cengal.

"Jadi apabila kita dapat usahakan pembinaan bot nelayan moden ini, ia akan lebih cepat dan murah untuk dibina, serta ia akan disekalikan dengan teknologi baharu yang lebih ringan dan tidak memerlukan pemasangan enjin besar serta boleh dibaiki dengan cepat (sekiranya rosak)," katanya dalam sidang media di sini pada Isnin.

Ahmad Amzad berkata, bot nelayan moden itu juga akan dilengkapi pelbagai teknologi penangkapan ikan termasuk penggunaan satelit.

Beliau berkata, MOSTI akan bekerjasama dengan Jabatan Perikanan Malaysia bagi pengujian bot dan Kementerian Pertanian dan Industri Makanan (MAFI) dalam hal pemberian insentif untuk skim pemilikan. - *Bernama*

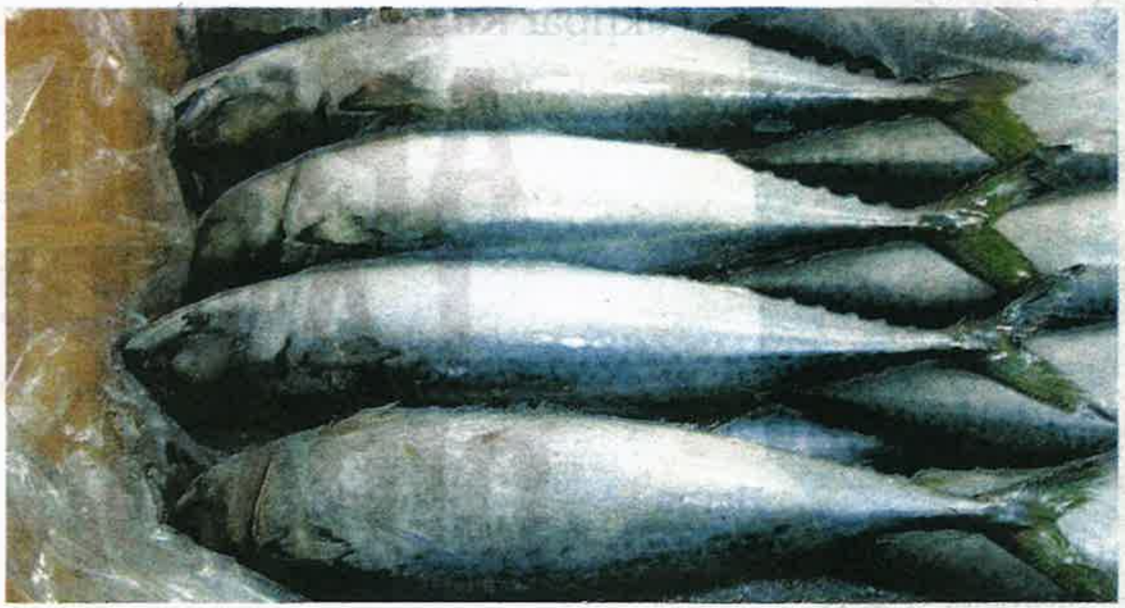
Ikan sejuk beku jadi alternatif rakyat

Oleh KAMALIZA KAMARUDDIN



IKAN sejuk beku dilihat jalan terbaik kepada pengguna bagi mengatasi kekurangan bekalan ikan segar seperti kembung dan selar di pasaran pada masa ini. – GAMBAR HIASAN

KUALA TERENGGANU – Pengguna disaran mendapatkan sumber protein alternatif daripada ikan sejuk beku bagi mengatasi kekurangan bekalan 'ikan rakyat' segar seperti kembung dan selar buat masa ini.

Pensyarah Fakulti Perikanan dan Sains Makanan Universiti Malaysia Terengganu (UMT), Dr. Mohd. Fazrul Hisam Abd. Aziz berkata, mereka tidak perlu berasa ragu kerana ikan sejuk beku mempunyai kualiti dan nutrien sama seperti produk segar, selain harganya berpatutan.

"Ia merupakan penyelesaian jangka pendek kerana kekurangan bekalan ikan kembung dan selar pada waktu ini cuma bersifat sementara.

"Bekalannya merosot kerana nelayan tidak dapat turun ke laut secara optimum berikutan keadaan ombak laut bergelora dan angin kencang ekoran peralihan ke fasa Monsun Timur Laut," katanya di sini semalam.

Mohd. Fazrul Hisam berkata, kekurangan bekalan ikan kembung dan selar pada waktu ini adalah normal dan biasanya kembali stabil apabila Monsun Timur Laut berakhir.

Jelas beliau, kempen membeli ikan sejuk beku lebih praktikal dilaksanakan oleh kerajaan, berbanding pemberian subsidi kerana isu kekurangan itu dijangka tidak mengambil masa yang lama.

"Hikmahnya, apabila tidak ramai nelayan terutama kategori pesisir pantai turun ke laut, ikan-ikan akan bertelur tanpa gangguan.

"Ia akan meningkatkan populasi ikan-ikan tersebut, sekali gus menstabilkan semula harga sebaik Monsun Timur Laut berakhir," katanya.

Dalam pada itu, beliau mencadangkan kerajaan agar meningkatkan bantuan kepada golongan nelayan yang terjejas pendapatan setiap kali tiba musim tengkujuh.

KERATAN *Kosmo!* semalam.

Kosmo! semalam melaporkan, Pengerusi Persatuan Nelayan Kebangsaan (Nekmat), Abdul Hamid Bahari memberitahu, kekurangan bekalan ikan kembung disebabkan hidupan air itu sedang bertelur pada ketika ini.

Masalah bekalan tersebut terutamanya melibatkan kawasan di utara tanah air menyebabkan harganya melambung tinggi sehingga RM25 sekilogram pada ketika ini.
